highest rear facing capacity

from birth to 25kg

Rear
facing is
5x safer!

Forward Facing

Significant
forces on
the neck

Rear Facing

Entire back of
seat supports
head, neck,
back and pelvis.

why is this important?

At birth a child's head represents 25% of their body weight compared to 6% for an adult. This means the neck has to support a greater proportional weight. During a collision when forward facing (at a young age) the crash forces and weight of the head can be too much for the neck to support. When rear facing the forces are spread across the entire back of the seat, thereby protecting the neck.

5 point harness to 25Kg

The majority of current car seats only allow the harness to be used up to 18kg (usually around the age of 3 or 4). For some children this may be too early for them to start using a booster with the adult seatbelt because they can loosen the belt and move out of it.

As a convertible seat **radian 5** allows parents to choose the right time to turn forward facing and when they do, the 5 point harness can be used up to 25kg.

This provides additional security up to the age of 7 so you know your little one is always in the safest position.

So when can you use the radian 5?

radian 5	Group 0 0-9kg	Group 1 9-18kg	Group 2 15-25kg

radian 5

safe stop shock absorber

radian 5 includes our patented safe stop smart strap. This works like a parachute, slowing the movement in a crash so that children are protected and don't experience the peak forces of a collision.

The patented safe stop gets added to **radian 5** when your child reaches 15kg and is using the seat forward facing. From 15-25kg safe stop reduces the increased forward motion of a heavier child to keep them safe and contained.

Scan the code to watch the video on how to install safe stop.

radian 5

simple 4 step installation process

First attach all the required parts depending on how the seat will be used, e.g. rear facing base, safe stop for forward facing over 15kg.

Place the seat in the car, feed the seatbelt through the tunnel and guides and secure the buckle.

Push the seat down, tighten the belt and secure with the lock off clip.

Attach the top tether and you're ready to go!

Seatbelt installation allows **radian 5** to work safely and keep children in a 5 point harness both forward and rear facing to 25kg. Isofix points and connectors are not strong enough to hold the same weight.

for more information visit uk.diono.com

full steel frame

Full steel frame with complete side impact protection and all round energy absorbing foam. **radian 5** may be a little heavier but this means it's a lot stronger to resist crash forces.

up to 4 cup holders

Storage for lots of sweets, toys and drinks. (1 cup holder included)

life of seat warranty

radian 5 can be registered for an extended warranty covering the full 10 year life of the seat.

space saving design

Narrow design for more space across the back seat.

fold flat

radian 5 is the only convertible car seat to fold, making storage and transport much simpler.

memory foam

Memory foam and soft fabrics ensure complete comfort on all journeys.
